

Knights-Nestle Management System

A merchandiser scheduling and stock-reporting tool for retail execution.

ROLE	TYPE	CATEGORY
Full-Stack Developer	Personal / portfolio project	Retail Operations

OVERVIEW

A full-stack retail execution application for scheduling and tracking distributed merchandiser workflows and stock reports, built with mobile-responsive React interfaces so field merchandisers can log visits and stock counts from any device.

KEY FEATURES

- Merchandiser visit scheduling across multiple retail stores
- In-store stock-report capture from mobile-responsive screens
- Visit status and stock-compliance tracking
- Manager-facing dashboards summarising visit and compliance rates

MY CONTRIBUTIONS

- Built the merchandiser scheduling and stock-reporting UI in React
- Implemented the Node.js API for visit scheduling and stock-report submission
- Optimised layouts for mobile use in-store, given field merchandisers work primarily on phones
