

PropManage

A property management app for listings, tenants and maintenance.

ROLE	TYPE	CATEGORY
Full-Stack Developer	Personal / portfolio project	Real Estate / PropTech

OVERVIEW

PropManage is a property management application for listings, tenant records, maintenance requests and document workflows. Role-based access keeps agents, property managers and administrators scoped to the data relevant to their role.

KEY FEATURES

- Property listing management with search and filtering
- Tenant records and lease tracking
- Maintenance request workflow from submission through resolution
- Document workflows for leases and inspection reports
- Role-based access control across agents, managers and admins
- Dashboards summarising occupancy and open maintenance items

MY CONTRIBUTIONS

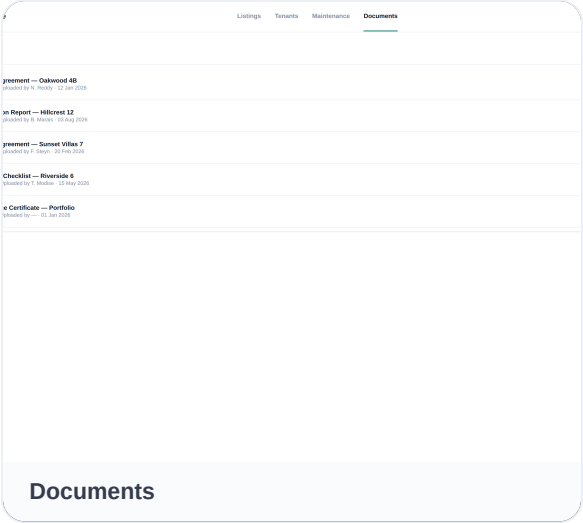

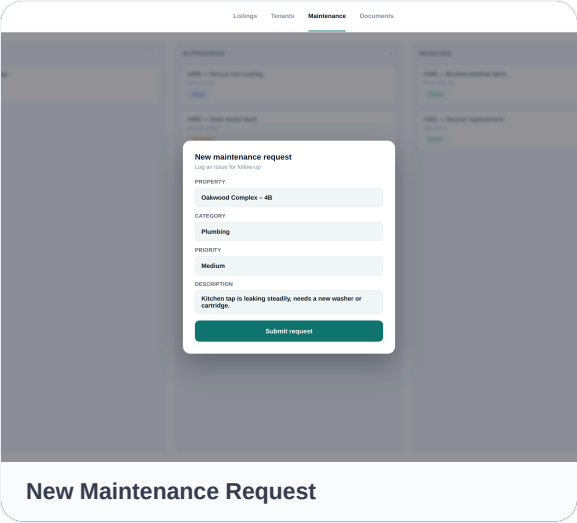

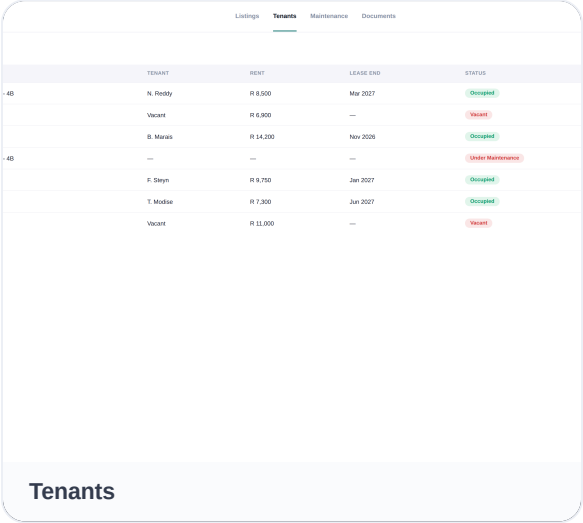

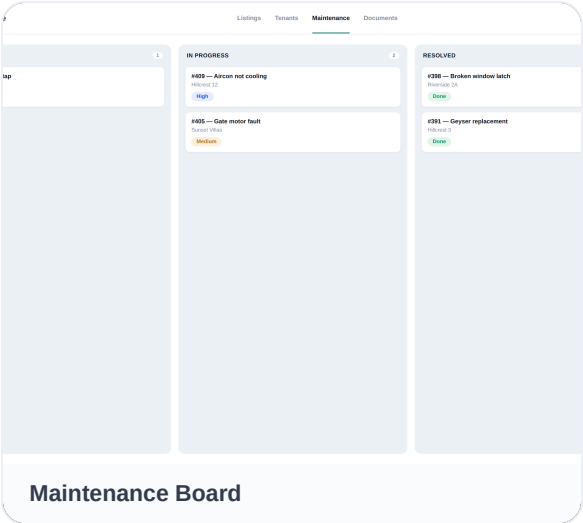

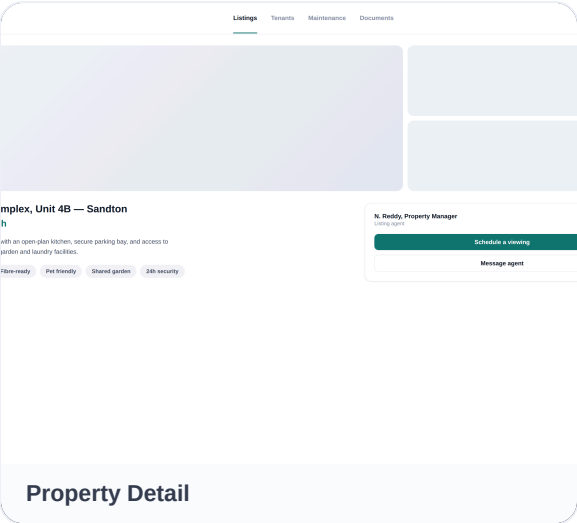

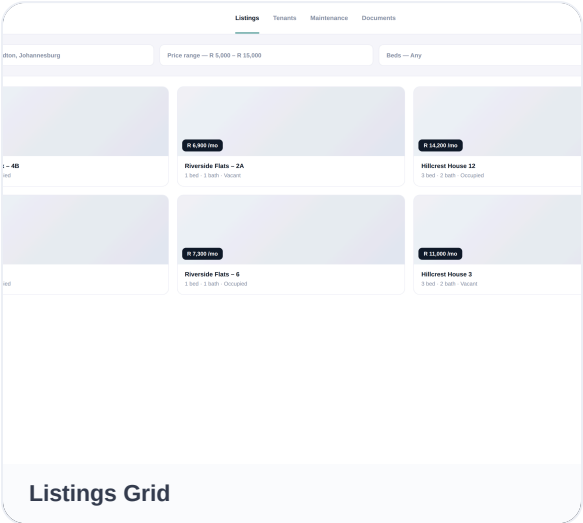

- Built the listings, tenant and maintenance-request UIs in React/TypeScript
- Designed the Express.js REST API and MongoDB schema for properties, leases and tickets
- Implemented role-based access control across the API and front end
- Set up document upload and storage workflows on AWS

TECH STACK

- React
- TypeScript
- Node.js
- Express.js
- MongoDB
- AWS
