

ShopSphere

A full-stack storefront with catalogue, cart and order management.

ROLE	TYPE	CATEGORY
Full-Stack Developer	Personal / portfolio project	E-commerce Platform

OVERVIEW

ShopSphere is a full-stack commerce application covering the product catalogue, search and filtering, cart management, checkout, customer accounts and order history. The interface is mobile-first and the backend exposes inventory-aware APIs so stock levels stay accurate across browsing, checkout and fulfilment.

KEY FEATURES

- Product catalogue with search, category filters and sort options
- Cart and multi-step checkout workflow with order summary and validation
- Customer account area with saved addresses and order history
- Inventory-aware APIs that keep stock counts accurate through checkout
- Responsive, mobile-first layouts across catalogue, product and checkout pages
- Deployed on Vercel with a MongoDB-backed product and order data model

MY CONTRIBUTIONS

- Built the catalogue, product detail and checkout flows in React/Next.js and TypeScript
- Designed the MongoDB schema for products, inventory, carts and orders
- Implemented the Node.js order and inventory APIs, including stock-decrement logic
- Tuned layouts and Tailwind CSS breakpoints for a mobile-first shopping experience
