

VibeCheck

A mood-based blogging app with custom markdown rendering.

ROLE	TYPE	CATEGORY
Full-Stack Developer	Personal / portfolio project	Content / Social

OVERVIEW

VibeCheck is a mood-based blogging application with custom markdown rendering and a React Reducer-driven state architecture, built to manage multi-layered application state across drafts, published posts, moods and reactions.

KEY FEATURES

- Custom markdown editor and renderer for post content
- Mood tagging so posts can be browsed and filtered by tone
- Draft and publish workflow with post status tracking
- Reaction and comment counts surfaced on the post feed
- React Reducer-based state management across the multi-layered app state

MY CONTRIBUTIONS

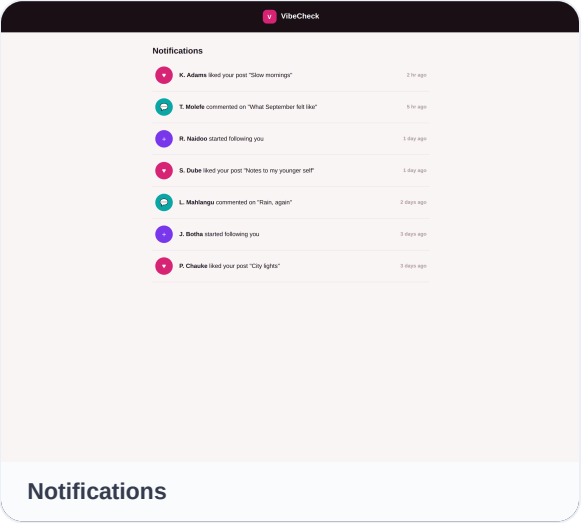

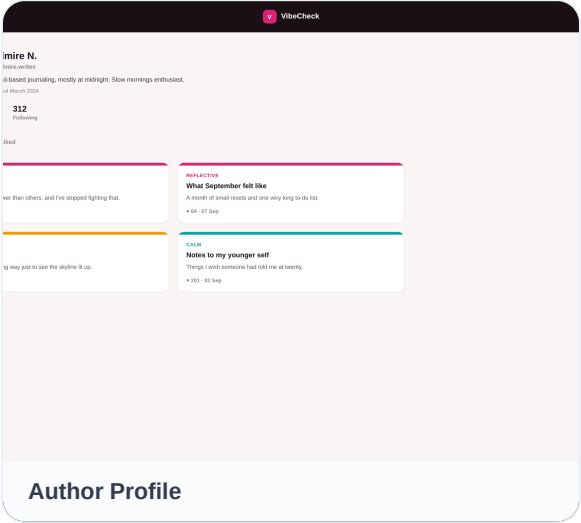

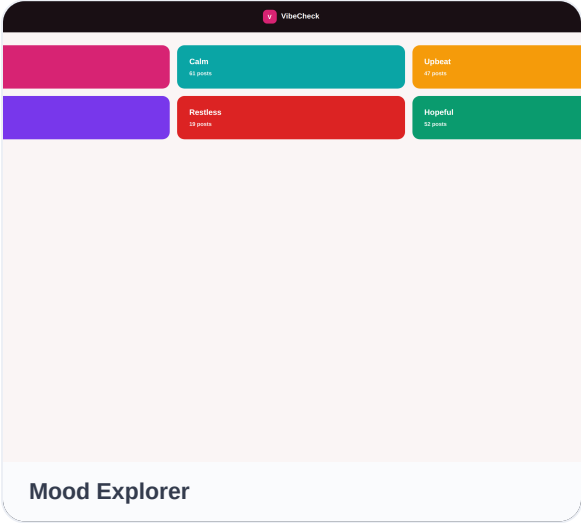

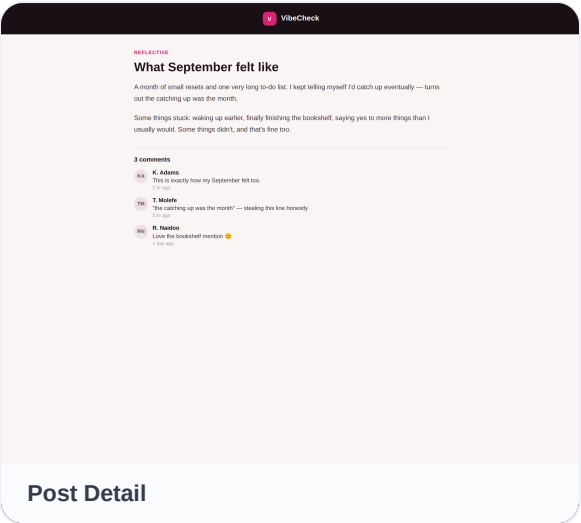

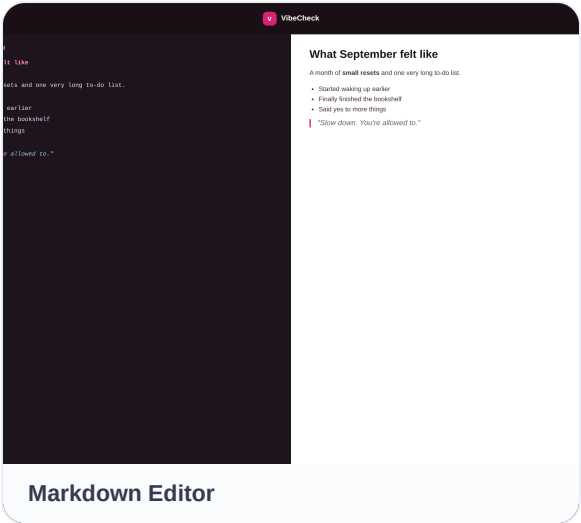

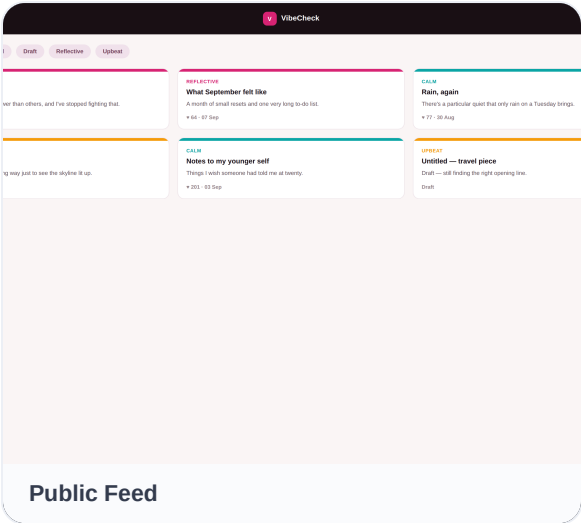

- Built the markdown editor and renderer from scratch in React
- Designed the Reducer-based state architecture for posts, drafts and reactions
- Implemented the Express.js API for posts, moods and reactions

TECH STACK

- React
- Node.js
- Express.js
- JavaScript
